

Meyer® SUPER-V^{LD}

V-plow performance for 1/2 ton pick-ups.

Super-V^{LD} is designed to fit 1/2 ton pick-ups. This smaller 7.5' blade design provides the same great performance of a larger V-plow, but allows users to plow in tighter areas such as driveways, condos or small parking lots. The aggressive attack angle provides incredible plowing performance, while each blade can be controlled independently with the touch of one button.

Pistol Grip Controller

Bottom-Trip Edge

The Meyer Super-V^{LD} features bottom-trip wings that trip independently in any configuration, something the competition can't match.

Scoop Mode

V Mode

Straight Mode

"V" Blade Positions

Get the convenience of a "V" blade, scoop blade or straight blade by pressing one button. The dual acting cylinders lock the blade so you can back drag snow in any blade position.
